## Answers

## Needed constants

## $1 \mathrm{u}=1.66 \times 10^{-27} \mathrm{~kg}$ $1 \mathrm{eV}=1.602 \times 10^{-19} \mathrm{~J}$

## Solution

1.1 Mass defect $=4 \times 1.00794-4.002602$

$$
\begin{equation*}
=0.029158 u \tag{0.2mark}
\end{equation*}
$$

(0.05 mark)

$$
=4.8402 \times 10^{-29} \mathrm{~kg}
$$

$$
=0.029158 \times 1.66 \times 10^{-27} \mathrm{~kg}
$$

$$
\begin{align*}
\text { Energy released }= & \text { Mass defect } \times(\text { speed of light })^{2}  \tag{0.2}\\
& =4.8402 \times 10^{-29} \times\left(3.0 \times 10^{8}\right)^{2} \mathrm{~J} \tag{0.1}
\end{align*}
$$

(0.1 mark)

$$
(0.4) \quad \text { mark }
$$

1.2 Total power out of the sun's surface $=$ total power received at a distance R on the earth, (0.5) ie. $4 \pi r^{2} E=4 \pi R^{2} S_{o}$
where E is the power per unit surface area of the sun, and $\mathrm{S}_{\mathrm{o}}$ is the solar constant, r and R are the radius of the sun and the mean distance between the earth and the sun, respectively.
Thus,

$$
\begin{align*}
S_{o} & =\left(\frac{r}{R}\right)^{2} E  \tag{0.3}\\
& =5.7 \times 10^{-8} \times(5800)^{4} \times\left(\frac{7.0 \times 10^{5} \times 10^{3}}{1.5 \times 10^{8} \times 10^{3}}\right)^{2}=1404.75 \mathrm{Wm}^{-2} \tag{0.3}
\end{align*}
$$

## (1.6 marks)

$$
1.3 \begin{align*}
\text { Time } & =\frac{\text { Mean earth }- \text { sun distance }}{\text { speed of light }} \\
& =\frac{1.5 \times 10^{11}}{3.0 \times 10^{8} \times 60}=8.33 \mathrm{mins} \tag{0.3}
\end{align*}
$$

1.4 Given that

$$
\begin{equation*}
E=\frac{h c}{\lambda} \Rightarrow \lambda=\frac{h c}{E} \tag{0.3mark}
\end{equation*}
$$

Substituting,

$$
\begin{align*}
\lambda & =\frac{6.62 \times 10^{-34} \times 3.0 \times 10^{8}}{2.42 \times 1.602 \times 10^{-19}}  \tag{0.2}\\
& =5.14 \times 10^{-7} \mathrm{~m} \tag{0.1}
\end{align*}
$$

$1.5 \log _{10} S=\log _{10} \beta-\alpha \log R$

### 1.6 Table of Values

(2.5 marks)
1.7 Equation of the graph plotted

$$
\begin{align*}
& \log _{10} \mathrm{~S}= 3.5773-1.3203 \log _{10} \mathrm{R}  \tag{1.0}\\
& \alpha=1.3203  \tag{0.4}\\
& \log \beta=3.5773 \\
& \beta=10^{3.5773} \\
&=3778
\end{align*}
$$

2.1 Choose the two correct options from A-F, why it is not commercially suitable to dissolve $\mathrm{SO}_{3}$ directly in water to give concentrated sulphuric acid? (0.40 mark)

| Option | Solution |
| :---: | :--- |
| A | To reduce the hazards of spillage |
| B | Because the density of the product is too high |
| C | To minimise transport costs of large volumes |
| D | Because the last step of the process is too expensive |
| E | Because the last step of the process is too exothermic |
| F | An aerosol of the sulphuric acid rapidly fills the room |

| Answer | Options |  |
| :---: | :---: | :---: |
| I | C | $\mathbf{0 . 2}$ Mark |
| II | F | $\mathbf{0 . 2}$ mark |

2.2. Match the role that sulphuric acid plays in manufacturing with each of the following industrial activities as shown below:
(i) Electroplating of iron and steel (0.25mark)
(ii) Fertilizer industry (0.25mark)
(iii) Manufacture of detergents ( $\mathbf{0 . 2 5 m a r k}$ )
(iv) Automotive industry ( $\mathbf{0 . 2 5 m a r k}$ )

| Option | Industrial Role |
| :---: | :--- |
| A | Sulphuric acid dissolves the iron and steel |
| B | Dissolution of phosphate rocks |
| C | Manufacture of lead acid accumulators |
| D | Cleaning of metal surfaces by dissolution of oxide layers |
| E | Functionalization of compounds with SO groups |

| Industrial activity | Option |  |
| :---: | :---: | :--- |
| i | D | $\mathbf{0 . 2 5}$ mark |
| ii | B | $\mathbf{0 . 2 5}$ mark |
| iii | E | $\mathbf{0 . 2 5}$ mark |
| iv | C | $\mathbf{0 . 2 5}$ mark |

2.3. Write balanced equations for the four major reactions in the Contact process. (2.0marks)

| Equation 1 | $\mathrm{S}+\mathrm{O}_{2} \quad \longrightarrow \quad \mathrm{SO}_{2}$ | $\mathbf{0 . 5}$ mark |
| :--- | :--- | :--- | :--- |

| Equation 2 | $2 \mathrm{SO}_{2}+\mathrm{O}_{2} \rightleftharpoons 2 \mathrm{SO}_{3}$ | $\mathbf{0 . 5}$ mark |  |
| :--- | :--- | :--- | :--- |
| Equation 3 | $\mathrm{SO}_{3}+\mathrm{H}_{2} \mathrm{SO}_{4}$ | $\longrightarrow$ | $\mathrm{H}_{2} \mathrm{~S}_{2} \mathrm{O}_{7}$ |
| $\mathbf{0 . 5}$ mark |  |  |  |
| Equation 4 | $\mathrm{H}_{2} \mathrm{~S}_{2} \mathrm{O}_{7}+\mathrm{H}_{2} \mathrm{O}$ | $\longrightarrow$ | $2 \mathrm{H}_{2} \mathrm{SO}_{4}$ |

2.4. Choose one option from A-C why vanadium (V) oxide is suitable for use as a catalyst in the Contact process
(0.25mark)
A. Vanadium (V) oxide removes electron from $\mathrm{SO}_{2}$ and is re-oxidised by oxygen
B. Vanadium (V) oxide supplies electrons to $\mathrm{SO}_{2}$ and is in turn reduced to vanadium (III) ions
C. Vanadium (V) oxide reacts with oxygen to give a complex which is regeneratable

Correct ans: A (0.25 mark)
2.5. Use appropriate ionic equations to show the reduction and re-oxidation of the vanadium ions
(1.0mark)

| Equation 1 |  | 0.5 mark |
| :---: | :---: | :---: |
| Equation 2 |  | 0.5 mark |

2.6. If the Contact process is $80 \%$ efficient, calculate the weight of $98 \%$ sulfuric acid produced from 100 kg of pure sulphur. Assume $100 \%$ conversion of sulphur to sulphur (IV) oxide. ( $\mathrm{S}=32.0, \mathrm{H}=$ $1.0, \mathrm{O}=16.0$ and density of $98 \%$ sulfuric acid is $1.98 \mathrm{~g} / \mathrm{cm}^{3}$ ).
(1.0mark)

$$
\begin{array}{cll}
\mathrm{S}+\mathrm{O}_{2} & \longrightarrow \mathrm{SO}_{2} \\
32 \mathrm{~g} & \xlongequal{\Longrightarrow} & 64 \mathrm{~g} \\
100000 \mathrm{~g} \text { will give } & \frac{64}{32} \times \frac{100000}{1}=200,000 \mathrm{~g} \mathrm{SO}
\end{array}
$$

(0.1 mark)
(0.1 mark)
(0.1 mark)

In the contact process:

$$
\begin{aligned}
2 \mathrm{SO}_{2}+\mathrm{O}_{2} & \longrightarrow 2 \mathrm{SO}_{3} \\
128 \mathrm{~g} & \xlongequal{\Longrightarrow} 160 \mathrm{~g} \\
200,000 & =\frac{160}{128} \times 200,000=250,000 \mathrm{~g} \mathrm{SO}_{3}
\end{aligned}
$$

At 80\% efficiency:
$\left(250,000 \mathrm{~g} \mathrm{SO}_{3} \mathrm{x} 80\right) / 100=200,000 \mathrm{~g} \mathrm{SO}_{3}$

$$
\begin{gathered}
\mathrm{SO}_{3}+\mathrm{H}_{2} \mathrm{O} \longrightarrow \mathrm{H}_{2} \mathrm{SO}_{4} \\
80 \mathrm{~g} \quad 98 \mathrm{~g} \\
200,000=\frac{98}{80} \times 200,000=245,000 \mathrm{~g}_{2} \mathrm{H}_{2} \mathrm{SO}_{4} \text { for } 100 \% \text { pure } \mathbf{( 0 . 1 \text { mark) }} \mathbf{( 0 . 1 \text { mark } )}
\end{gathered}
$$

Let the weight of $100 \%$ pure sulfuric acid $=W_{1}=245,000 \mathrm{~g}$ and weight of $98 \%$ sulfuric acid $=\mathrm{W}_{2}$

Therefore $100 \% \times 245,000 \mathrm{~g}=\mathrm{W}_{2} \times 98 \%$
Hence $W_{2}=(100 \times 245,000 \mathrm{~g}) / 98=250,000 \mathrm{~g}$ of $98 \% \mathrm{H}_{2} \mathrm{SO}_{4}$
(0.1 mark)
2.7. Write a balanced equation for the reaction of excess sodium chloride and concentrated sulfuric acid.
(0.5mark)

Answer:

$$
2 \mathrm{NaCl}+\mathrm{H}_{2} \mathrm{SO}_{4} \longrightarrow 2 \mathrm{HCl}+\mathrm{Na}_{2} \mathrm{SO}_{4}
$$

2.8. Write a balanced equation representing the dehydration of sucrose by concentrated sulphuric acid. The formula for sucrose is $\mathrm{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11}$

OR

$$
\mathrm{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11}+11 \mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow 12 \mathrm{C}+11 \mathrm{H}_{2} \mathrm{SO}_{4} \cdot \mathrm{H}_{2} \mathrm{O}
$$

2.9. Sulfuric acid is a diprotic acid. Write equations to show its ionization in water ( $\mathbf{0 . 5 m a r k}$ )

| Equation 1 | $\begin{aligned} & \mathrm{H}_{2} \mathrm{SO}_{4} \longrightarrow \begin{array}{c} \mathrm{HSO}_{4}^{-} \\ \text {OR } \end{array}+\mathrm{H}^{+} \\ & \mathrm{H}_{2} \mathrm{SO}_{4}+\mathrm{H}_{2} \mathrm{O} \xrightarrow{\longrightarrow} \mathrm{HSO}_{4}^{-}+\mathrm{H}_{3} \mathrm{O}^{+} \end{aligned}$ | (0.25 mark) |
| :---: | :---: | :---: |
| Equation 2 | $\begin{aligned} & \mathrm{HSO}_{4}^{-} \longrightarrow \\ & \mathrm{HSO}_{4}^{-}+\mathrm{H}_{2} \mathrm{O} \xrightarrow{\mathrm{SO}_{4}^{2-}} \begin{array}{l} \text { OR } \end{array} \mathrm{H}^{+} \\ & \mathrm{SO}_{4}^{2-}+\mathrm{H}_{3} \mathrm{O}^{+} \end{aligned}$ | (0.25 mark) |

2.10. Determine the volume of gas produced in the first stage of the Contact process when 200 g of sulphur is converted to sulphur (IV) oxide at $300^{\circ} \mathrm{C}$ and 1 atmosphere pressure. Assume the conversion of sulphur to sulphur (IV) oxide is $100 \%$ ).

$$
\begin{equation*}
V=\frac{n R T}{P} \tag{0.25mark}
\end{equation*}
$$

$\mathrm{S} \longrightarrow \mathrm{SO}_{2}$

$$
\begin{equation*}
32 \mathrm{~g}=64 \mathrm{~g} \tag{0.25mark}
\end{equation*}
$$

$$
\begin{equation*}
200 g=\frac{64}{32} \times 200=400 g \tag{0.25mark}
\end{equation*}
$$

$$
\begin{equation*}
n=\frac{400}{64}=6.2 \mathrm{~mol} \tag{0.25mark}
\end{equation*}
$$

$$
V=\frac{n R T}{P} \equiv \frac{6.255 \times 0.082 \times 573}{1}=293.66 l
$$

2.11. What volume of $0.20 \mathrm{~mol} \mathrm{dm}^{-3}$ sulphuric acid is required to neutralise completely
$25 \mathrm{~cm}^{3}$ of 16.0 g of sodium hydroxide dissolved in $0.25 \mathrm{dm}^{3}$ of water? $(\mathrm{Na}=23.0, \mathrm{O}=16.0, \mathrm{H}=$ $1.0, \mathrm{~S}-32.0$ )
(1.0 mark)

$$
\begin{equation*}
\text { Molarity of } \mathrm{NaOH}=\frac{16}{40} \times \frac{1000}{250}=1.6 \mathrm{M} \tag{0.25mark}
\end{equation*}
$$

$$
\begin{equation*}
\frac{M_{a} V_{a}}{M_{b} V_{b}}=\frac{n_{a}}{n_{b}} \tag{0.25mark}
\end{equation*}
$$

$$
V_{a}=\frac{1.6 \times 25}{0.2 \times 2}=100 \mathrm{~cm}^{3}
$$

$$
\begin{equation*}
\frac{0.2 \times \mathrm{V}_{\mathrm{a}}}{1.6 \times 25}=\frac{1}{2} \tag{0.25mark}
\end{equation*}
$$

*Note: A bonus mark of $\mathbf{1}$ for attempting question 2.11 (different versions of question was given).
2.12. From the list supplied below, select three (3) fuels that will give the most acid rain.
(1 Firewood (b) petroleum (c) coal, (d) biodiesel (e) bioethanol, (f) natural gas
(0.60 marks)

| Selection | Fuel |  |
| :---: | :---: | :---: |
| i | b | $\mathbf{0 . 2}$ mark |
| ii | c | $\mathbf{0 . 2}$ mark |
| iii | f | $\mathbf{0 . 2}$ mark |

|  |  | $(0.2$ mark $)$ |
| :--- | :---: | :--- |
| Alma millsoni | 9 | 72 <br> $(0.2$ mark $)$ |
| Total (N) | 50 | $\mathbf{i}=\mathbf{1 n}=\mathbf{6 1 2}$ <br> $(0.4$ mark $)$ |

3.4.2. Determine the diversity (d) of earthworms in the snail farm. (1.0 Total mark)

$$
\begin{aligned}
& d=N(N-1) i=0 n n(n i-1) \\
& d=\frac{50(50-1)}{10(10-1)+15(15-1)+16(16-1)+9(9-1)} \\
& \quad d=\frac{50(49)}{90+210+240+72} \\
& d=\frac{2450}{612} \\
& d=4.00(0.3 \text { mark })
\end{aligned}
$$

3.4.3. (Mark X into the boxes)
(0.8 Total marks)

|  | True | False |
| :--- | :--- | :--- |
| a) plant roots do notabsorb oxygen from the soil because it is transported <br> from the leaves | X <br> $(0.2$ mark $)$ |  |
| b) earthworms themselves use the oxygen from the soil | X <br> $(0.2$ mark $)$ |  |
| c) bacteria that transform the ammonia produced by animals into nitrate, <br> need the oxygen from the soil | X <br> $(0.2$ mark $)$ |  |
| d) Oxygen from the soil is necessary for the decomposition of the organic <br> matter |  | X <br> $(0.2$ mark $)$ |

3.4.4. The earthworm casts consist of compounds containing elements. Plants need elements. Which of the elements contained in the casts, is the most important for the plant to take up using their roots? Choose one of the following elements: $\mathrm{O}, \mathrm{C}, \mathrm{N}, \mathrm{H}$ Answer: $\mathbf{N}$ ( 0.5 mark)
3.5.1. Use the data in the table to present this information by drawing a suitable graph.
(1.5 Marks)

Appropriate graph (each column $\times \mathbf{0 . 1 2 5}$ ) $=\mathbf{1 . 0}$ mark
Correct scale $=0.3 \mathrm{mark}$
Correct units= 0.2 mark
Total score 1.5 marks.
3.5.2. From the graph which of the observations below is/are the most probable conclusion(s).Tick $(\sqrt{ })$ the correct boxes
(0.5 Mark)
(i) The red colour induced the highest amount of portion, the least amount of casts in the dark portion.
(ii) Colour of light has no effect on the behavioral exposure. .
 responses of worm to light

(iii) Hyperiodrilus sp.could not diffentiate between the different light colours.
$\square$
(iv) Green colour induced the highest amount of casts produced in the dark portion.
