## PROBLEM 1

1.1.1. Fill in Table 3 in the Answer sheet with the information related to each community.

| Community | Species <br> Richness (S) | Total number of individuals ( N ) | Name of dominant species | Abundance of dominant species | J |
| :---: | :---: | :---: | :---: | :---: | :---: |

1.1.2. Indicate which community has a greater biological diversity.

Answer: Sample 1
1.1.3 Mark true ( $T$ ) or false (F) appropriately for each explanation shown on the answer sheet, in order to justify the answer given in 1.1.2.

| A. After ten years, the community revegetated with jarilla and the community left to natural |
| :--- |
| succession have a wide difference in species richness, related to Larrea spp.'s facilitating |
| effect. |
| B. The presence of Larrea in sample 1 increased the abundance of shrubs and herbaceous forms. |
| This could indicate that Larrea favors the settling of other species, augmenting the evenness |
| of this community. |
| (a) |
| C. The favoring effects are indicating that the revegetated community (sample 1) presents less |
| distribution of forms of life than the community left to natural succession. |

1.2. Calculate the total surface area of the region. Express the final result in square hectometers (hectares).

Figure № 4: Schematic representation of the region to be revegetated.

Major base: 1000 m

Minor base: 200m
Height:
They can use sexagecimal degrees or radians.
Using radians:
$\mathrm{h}=\tan \left(\frac{\pi}{3}\right) \cdot\left(\frac{10^{3}-2 \cdot 10^{2}}{2}\right)=692.82$

Using sexagecimal degrees:
$\mathrm{h}=\mathrm{t} \quad \mathrm{a} 6 \quad$ i) $\left.)^{1}{ }_{\left(\left(^{3}-02.1^{2}\right.\right.}^{2}\right) \stackrel{0}{=} 6 \quad .8$
Value of height: 692.82 m
$C=\frac{\left(10^{3}+2 \times 10^{2}\right)}{2} 692.82=4.16 \times 10^{5}$

1.3.1. Find the velocity of the rock when it passes by point II.

RESOLUTION: The problem is essentially dynamics in one dimension, taking the movement axis $x$ parallel to the slope with its positive sense "down the slope" (see figure below). Thus,

A. Summing forces in $x$, and applying Newton's $2^{\text {nd }}$ :

$$
\begin{gathered}
\Sigma \mathrm{F}_{\mathrm{x}}=\mathrm{ma}_{\mathrm{x}} \\
\mathrm{~F}_{\text {gravity }(\mathrm{x})}+\mathrm{F}_{\text {friction }}=\mathrm{ma}_{\mathrm{x}} \\
\mathrm{mg} \operatorname{sen} 30^{\circ}-\mu \mathrm{mg} \cos 30^{\circ}=\mathrm{ma}_{\mathrm{x}}
\end{gathered}
$$

(where $\mu=0.46$ is the coefficient of kinetic friction).
( a) [0.40]
B. Solving for $\mathrm{a}_{\mathrm{x}}$, and computing (note that there's no need to know the mass of the rock):

$$
\begin{gathered}
a_{x}=g \operatorname{sen} 30^{\circ}-\mu g \cos 30^{\circ} \\
a_{x}=9.81 \mathrm{~m} / \mathrm{s}^{2} \operatorname{sen} 30^{\circ}-0.469 .81 \mathrm{~m} / \mathrm{s}^{2} \cos 30^{\circ}=0.99 \mathrm{~m} / \mathrm{s}^{2} \text { ó } 1 \mathrm{~m} / \mathrm{s}^{2}(\mathrm{~b})[0.40]
\end{gathered}
$$

C. Finally, as this acceleration is constant, and the displacement $\Delta x$ and the velocity $\mathrm{V}_{\mathrm{I}}$ are given, one can use
$\mathrm{V}_{11}{ }^{2}=\mathrm{V}_{1}{ }^{2}+2 \Delta \mathrm{xa} \mathrm{x}_{\mathrm{x}}$
$V_{I I}=V\left(2 \Delta x a_{x}+V_{1}{ }^{2}\right)=V\left[2(50 \mathrm{~m})\left(0.99 m / s^{2}\right)+(10 \mathrm{~m} / \mathrm{s})^{2}\right]=14.10 \mathrm{~m} / \mathrm{s}$

ii) Sum forces in $x$ (same as previous problem):

$$
\begin{align*}
& \sum F_{x}=m a_{x} \\
& m g \operatorname{sen} 30^{\circ}-\mu m g \cos 30^{\circ}=m a_{x} \\
& g \operatorname{sen} 30^{\circ}-\mu g \cos 30^{\circ}=a_{x} \tag{b}
\end{align*}
$$

iii) Finally, solving for $\mu$ and using the value of $a_{x}$ found in i):

$$
\begin{aligned}
& \mu=\left(g \operatorname{sen} 30^{\circ}-a_{x}\right) / g \cos 30^{\circ} \\
& \mu=\left[\left(9.81 \mathrm{~m} / \mathrm{s}^{2}\right) \operatorname{sen} 30^{\circ}-\left(-0.5 \mathrm{~m} / \mathrm{s}^{2}\right)\right] /\left(9.8 \mathrm{~m} / \mathrm{s}^{2} \cos 30^{\circ}\right)

1.4.2 Compute how many kilograms of fertilizer must be added per square meter of terrain. Round results using two decimal after the unit.

## RESOLUTION USING DIMENSIONAL ANALYSIS:

The amount of $P$ to add is the difference: 8.12-1.00= 7.12 mg .
(a) $[0.20]$

To find the amount of fertilizer per ha, one has to find the mass of soil ( kg ) per $\mathrm{hm}^{2}$ :
Then, "surface area of site" X "depth" X "density":
$\frac{\mathrm{kg} \text { soil }}{\mathrm{m}^{2}}=30 \mathrm{~cm} \frac{1 \mathrm{~m}}{100 \mathrm{~cm}} \frac{1630 \mathrm{~kg} \text { soil }}{\mathrm{m}^{3}}=489 \frac{\mathrm{~kg}}{\mathrm{~m}^{2}}$

Solving for C: $C=\frac{A}{\epsilon L}$
$C=\frac{0.47 \mathrm{Mcm}}{89201 \mathrm{~cm}}=5.26 \times 10^{-5} \mathrm{M}$
Then:
BY DIMENSIONAL ANALYSIS :
$5.26 \times 10^{-5} \frac{\mathrm{~mol}}{\mathrm{l}} \frac{302 \mathrm{~g}}{\mathrm{~mol}} \frac{1000 \mathrm{mg}}{1 \mathrm{~g}}=15.88 \frac{\mathrm{mg}}{\mathrm{l}} \quad$ (a) [0.35]

2.5.2. Find the equilibrium temperature of the Earth with the atmosphere (Figure 9b), assuming that the atmosphere absorbs all the radiation emitted by the surface, and reemits it back to both the Earth and Space in equal proportions. Start out with intensity balance on the Earth surface and on the atmosphere.

Hint:
Assume that the atmosphere only absorbs energy from the Earth surface, and that both emit energy as a black body.

\section*{RESOLUTION:}

Energy balance for the Earth:
From the Sun + From the atmosphere= Emitted

2.6.1. In this context, calculate the minimum amount of energy needed to completely melt a block of 10000 kg of ice, initially at \(-10^{\circ} \mathrm{C}\).
Thermodynamic constants:
Specific heat capacity of Ice: \(\mathrm{c}=2.093 \mathrm{Jg}^{-1} \mathrm{~K}^{-1}\)
Latent heat of ice fusion: \(/=333.7 \mathrm{~J} \mathrm{~g}^{-1}\)

\section*{RESOLUTION:}

First, ice has to be heated from \(-10^{\circ} \mathrm{C}\) to \(0^{\circ} \mathrm{C}\) (melting temperature)
\[
E_{1}=m \cdot c \cdot \Delta T
\]
\(E_{1}=10 \times 10^{6} \mathrm{~g} \cdot 2.093 \mathrm{~J} \cdot \mathrm{~g}^{-1} \cdot \mathrm{~K}^{-1} \cdot 10 \mathrm{~K}\)
(a) \([0.40]\)
\(E_{1}=2 \times 10^{8} J\)

Once the ice is at \(0^{\circ} \mathrm{C}\), it is melted:
\[
\begin{aligned}
E_{2}=m \cdot l \\
E_{2}=10 \mathrm{x} 10^{6} \mathrm{~g} \cdot 333.7 \mathrm{~J} \cdot \mathrm{~g}^{-1} \\
E_{2}=3.34 \times 10^{9} \mathrm{~J}

3.2.1 Table D shows muscular contraction processes. Complete Table E (indicated in Answer Sheet), indicating the letter of the process in the order in which they occur.

\section*{Table D: Processes of muscle contraction}
A. ATP is hydrolyzed to ADP + Pi (inorganic phosphorus) and the myosin head is separated from the active site.
B. Acetylcholine acts on a local area of the sarcolemma to open multiple membrane protein channels. This allows the entry of large amounts of sodium ions into the sarcolemma, which initiates an action potential in the muscle fiber.
C. The action potential depolarizes the sarcolemma. The release of \(\mathrm{Ca}^{++}\)ions from the sarcoplasmic reticulum occurs.
D. \(\mathrm{Ca}^{++}\)ions are pumped back into the sarcoplasmic reticulum, where they remain until the arrival of a new action potential to the muscle.
E. An action potential reaches the neuromuscular junction (synapse) of a motor neuron and a muscle, acetylcholine is released from the axon terminal.
F. \(\mathrm{Ca}^{++}\)ions initiate attractive forces between the actin and myosin. Filaments of myosin and actin are arranged next to each other within the sarcomere so that that they can interact in an organized fashion resulting in muscle contraction. During contraction, myosin heads bind actin and pull the filaments in towards the center.

Figure 14: Pulse measurement using a simple pendulum.
3.7.1. Calculate the length of the pendulum used by the student, the period of simple pendulum is given by
\(T=2 \pi \sqrt{\frac{L}{g}}\)
Being:
\(L\) the length of the pendulum
\(\mathrm{g}=9.81 \mathrm{~m} \mathrm{~s}^{-2}\)

\section*{RESOLUTION:}

By rule of three the period T of the pendulum is
\[
(0.4 \mathrm{~s}) \times(20)=T \times(15) \quad->\quad T=(0.4 \mathrm{~s}) \times(20 / 15)=0.53 \mathrm{~s}
